2CEAI702: MLOps Practical-4

Practical-4 Deploy the Machine Learning Model using Flask and Docker.

Task 1: Install the required libraries

```
pip install Flask
pip install gunicorn
```

Task 2: Follow the steps described in theory material to deploy the model using Flask. Run the flask application to execute the deployed model.

Flask Code:

Task 3: Create the docker file using the steps described in theory material.

Docker File Code:

```
FROM python:3.8-slim
WORKDIR /app
COPY . /app
RUN pip install --trusted-host pypi.python.org -r requirements.txt
EXPOSE 80
ENV NAME World
CMD ["python", "app.py"]
```

2CEAI702: MLOps Practical-4

Task 4: Create the Docker Image

docker build -t dockerfile.

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker build -t dockerfile .

[+] Building 25.5s (9/9) FINISHED

=> [internal] load .dockerignore

=> => transferring context: 2B

=> [internal] load build definition from dockerfile
```

Task 5: Create the Docker File

What's Next? View summary of image vulnerabilities and recommendations → docker scout quickview PS D:\SEM 7\ML-OPS\Practical\practical> docker run -p 4000:80 dockerfile

Task 6: Check Performance

```
PS D:\SEM 7\ML-OPS\Practical\practical> docker images
